Professional summary

Hi, I'm Nikolai - PHP backend developer with 3+ years of commercial experience.

I specialize in building and maintaining web applications on PHP, with hands-on experience across multiple CMS platforms - Bitrix, WordPress, MODX, OpenCart. I'm comfortable working across the stack: from custom module development and REST API integrations to adaptive frontend and SEO optimization.

I've supported 75+ client websites, integrated payment systems and delivery services, and improved PageSpeed scores from red to yellow/green zone across 10+ projects.

I actively use AI tools (Claude, Codex, ChatGPT) as part of my development workflow - to move faster while keeping quality in check.

I'm currently looking for remote opportunities where I can bring reliable backend expertise and a practical, results-focused approach.

Work experience
